Someone who has dementia, delirium or other communication difficulties, can find changes, such as moving to an unfamiliar place or meeting new people who contribute to their care, unsettling or distressing. **This is me** provides information about the person at the time the document is completed. It can help health and social care professionals to build a better understanding of who the person really is.

This is me should be completed by the individual(s) who know the person best and, wherever possible, with the person involved. It should be updated as necessary. It is not a medical document.
